SHOPIFY PROJECTS

LIGHTING SUPPLY GUY — *Shopify Expert* (1 month)

Environment: Shopify

Website: <https://lightingsupplyguy.com/>

Project Description: Development of new features and support lighting distributor serving business customers

Responsibilities:

- Setting up deployment and staging;
- Created an individual wholesale order form with support for discounts for wholesale customers. Admin can add to any customer the ability to create a "Custom Bulk Order", SKU items are uploaded via CSV. The client on one page sees all his products (usually those that he orders most often), sees the quantity in stock and product options (color/size), and orders. As a result, the buying process for the wholesale buyer is much faster;
- Added purchase order number field on cart page;
- Reviewed a code of this project for a new developer;

SMOCKED AUCTIONS — *Shopify Expert* (2 months)

Environment: Shopify

Website: <https://smockedauctions.com/>

Project Description: Development of new features and support shop traditional children's clothing with a modern twist

Responsibilities:

- Installed Git flow on Shopify Theme Kit with development, master, staging, features and fixes branches;
- Conducted UI / UX and Performance audit of the site, created a presentation with all the problems and ways to solve them;
- Added to the product page (PDP) a section of recommendations for other products, working according to the algorithm "Customers who bought this product also bought" / "Frequently buy together";
- Added display of additional monogram fields on clothes (text, color and type) on the Brightpearl packing list;
- Created an editable "Safety and Recall" feedback form, where the user can leave a review or request a refund;

NO, THANK YOU — *Shopify Expert* (1 month)

Environment: Shopify

Website: <http://nty.co/>

Project Description: Development of a newly designed store for a skincare brand that offers a range of CBD-infused skincare products

Responsibilities:

- Searching for a suitable similar theme according to the old design;
- Moved all content and pages from the old site;
- Setting the theme, adjusting the design;
- Implemented Klaviyo app;
- Implemented Reviews section;

REACT PROJECTS

INVESTOR LAB — *React Developer* (6 months)

Environment: React/Redux

Website: UNDER NDA

Project Description: Development of the website for investment real estate, connecting real data from a server instead of static. Initially, the project came with poorly written code (apparently, the developer was not experienced at the beginning), so we had to slightly change the architecture and fix the main bugs and holes in the project. Then he added the integration of new endpoints from the back-end, fixed the UI, and added new functionality

Responsibilities:

- Integration of data from the server side through the REST API.
- Integrated Google Maps API. Added the output of custom markers with the price of the house on this map;
- Added display and sending of comments;
- Added house pricing schedule; The antd/@charts library was used;
- Added filtering and sorting for the main house list table. The page simultaneously displays data on the map and in the table. There is a filter button when clicked, a window appears in which you can specify the price, the number of beds, parking, and the number of square meters of the apartment or house. In real-time, the map and table are updated and display what the visitor has indicated;
- Implemented registration, login, forgotten password, and email confirmation forms;
- Implemented Redux functionality;

VUE PROJECTS

BULLBET — *Vue Developer* (1 month)

Environment: Vue/Vuex

Website: UNDER NDA

Project Description: Created user account page for the bookmaker's office. The main goal was the creation of a Front-End part for the website and to connect API from the back-end

Responsibilities:

- Created an HTML template for the header, footer, main pages, and modal windows;
- Created additional Vue components from the header and footer blocks;
- Created routes for the site;
- Implemented a custom slider for the calculator using nouislider library;
- Implemented custom selection;
- Implemented custom date selection;
- Implemented emoji picker via @joeattardi/emoji-button library;
- Implemented tooltip;
- Created custom style scrollbar;
- Drag&Drop section created;

CLEANER TRACK PRO — *Vue Developer* (1 month)

Environment: Vue/Vuex

Website: UNDER NDA

Project Description: Development tools for monitoring the employment of employees and equipment in the company, reporting

Responsibilities:

- Implemented Google Firestore;
- Implemented Vuex functionality;
- Created entities of the client, employee, and equipment;
- Added the ability to add and edit these entities;
- Added validation for editing and creating fields;
- Added the ability to create a Job with the fields Client, Employee, Equipment, Work start date, Work end date, Description, Price;
- Added the ability to create monthly reports: Invoice, Profit, Expense for the work done, employee salaries, equipment price, and service cost;

GUTENBERG PROJECTS

BANESCO INTERNACIONAL — *Gutenberg Developer* (6 month)

Environment: WordPress

Website: UNDER NDA

Project Description: Development of a large project for a bank/financial institution whose principal branch is located in Caracas on reusable Gutenberg blocks with multilingualism and multiple locations/branches

Responsibilities:

- Created about 30 dynamic blocks;
- Added a calculator for the current exchange rate of the euro/dollar to the Dominican peso;
- Added a calculator of the recommended bank card for the client by the amount of the deposit/credit limit;
- Added dynamic page for comparing bank cards;
- Added a page of addresses/offices of banks with filtering by ATMs/terminals/points of sale and courier delivery, developed on the Google Maps API;
- Developed a blog page and promotions with a filter by categories and tags;
- 2 contact forms have been developed with autocompletion of the user's country and code for the phone number via Gravity Form and extra add-ons;
- On the basis of these blocks, 7 landing pages were created for advertising / providing information about services and bank cards;
- Created editable FAQ pages and information page with bank fees;
- Created HTML-letter for email;
- Connected WordPress Multisite;

WORDPRESS PROJECTS

PRESTIGE MOSAIC — *Full-stack Developer* (1 month)

Environment: WordPress

Website: <https://prestigemosaic.co.il/>

Project Description: Development of a portfolio website for mosaic decore company with Project, Service, and Blog Pages. The HTML template was created and implemented to the new WordPress theme with a connection of domain and hosting

Responsibilities:

- Created and implemented a template for the default page, home page, etc.;
- Created and implemented a slider on the main page using the Swiper.js library;
- Created and implemented a modal contact form using its own custom class "Modal";
- Created and implemented project categories and a template for one project;
- Created and implemented a blog page and a template for a single post;
- Added multilingual locales (Hebrew, Russian, English) using WordPress PolyLang;
- Implemented the "Load more" content function using the AJAX loader;

- Created header animation when scrolling the site using JavaScript and CSS;
- Created a blog page;
- Service page created;
- Created a modal window: "Callback" button;
- Added phone placeholder to all phone inputs using iMask.js;

ACCESS DEV — WordPress Developer (2 weeks)

Environment: WordPress

Website: <https://www.access.dev/>

Project Description: The main goals were the development of new pages and resolving some bugs. The site specializes in web development on the Shopify and WordPress platforms

Responsibilities:

- Updated WordPress core and currently installed plugins (Advanced Custom Fields, Contact Form 7, Mail Poet);
- Added the Portfolio page;
- Added project page with flexible settings. For the project page, it is possible to disable/enable some sections and change their order. For example first the reverse form, then the description of the project or vice versa, there are 7 such sections in total;
- Added careers and job pages;
- Changed and added new images. There were new images in a new design to replace. For some of them, I created new blocks. Changed images with Media Files WordPress;
- Added links to new pages in the footer and header;
- Fixed contact form display. Fixed display of the radio button, as it did not match the design;

TRAINEE PROJECTS

USOF — *Trainee Laravel Developer* (1 month)

Environment: Laravel, React

Repository: <https://github.com/mmarienko/usof/>

Project Description: Laravel-based website with functionality similar to Stack Overflow: users can register an account and ask a question while other users have the ability to answer in comments. Includes custom logic. Both questions and comments have ratings based on the number of likes and dislikes. The main goal was to develop the API interface.

Responsibilities:

- Created an authentication API for the "registration/login/logout/password reset using JWT function;
- Created custom API: get users, get user by ID, create user, upload an avatar, update user, delete user;
- Created a post resource API;
- Created category resource API;
- Created a comment resource API;
- Created likes/dislikes resource API;
- Created admin resource API;
- Created login/registration, posts, profile pages using React JS;
- Created routes for the site;
- Displayed all information from the API on the pages listed below;
- Added New Post and New Comment pages for working with API;

MMARIENKO STORE — *Trainee Shopify Developer* (3 months)

Environment: Shopify.

Repository: <https://github.com/mmarienko/dawn/>

Project Description: Trainee Shopify website with lots of customizations applied, including a number of API-based features implemented from scratch.

Responsibilities:

- Customized product filters;
- Customized promotions such as free purchases over a certain order subtotal, one-time and reusable coupons, and a free gift with a specific product;
- Added modal pop-up window with advertising messages to the main page;
- Created carousel widget;
- Created custom logic for product icons (new, sale, sale) to display on category pages;
- Created a widget "New arrivals" that displays a list of the last 5 items added to the catalog;
- Applied modifications to the navigation menu;
- Created a "Recommended Products" widget based on product tags;
- Added the ability to engrave and gift message for products;
- Built-in custom logic to display the number of pending orders in the global header;
- Included delivery to multiple addresses and return of the order;

- Set up payment and delivery methods;
- Added system information about the client (browser, location, IP) to the newly created order;
- "Vintage Theme" moved to the new OS 2.0 theme version;
- Added internationalization and multicurrency;
- Changed checkout form, added promotion popup and custom style;
